

Stained Glass Art Film

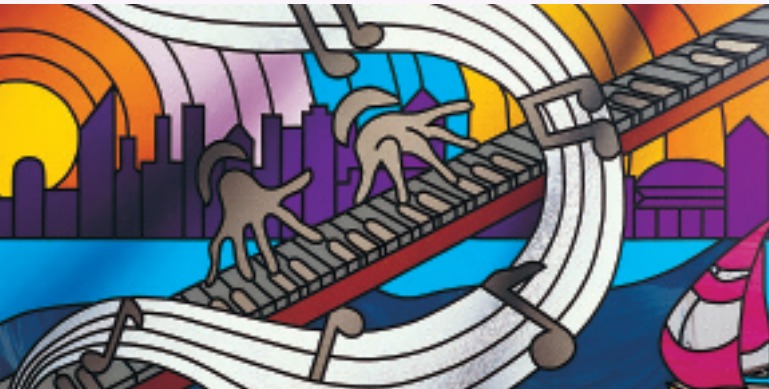

the
magic
of colour

plain colours ♦ **abstract** effects ♦ **background** textures

“mere
colour unspoiled by meaning,
 unallied with definite form, can
speak to the soul
 in a thousand different ways”

Oscar Wilde

Stained Glass Art Film is a range of printed and embossed filmic materials which, when used in conjunction with RegaLead lead profiles and RegaBevels glass clusters, can create stunning decorative glass effects.

Overlays of this kind have been used throughout the world for over 25 years, creating glass designs for residential properties, restaurants, office buildings and shopping centres.

As the materials are applied to a single piece of glass they can be used as part of an insulated glass unit, applied to mirror or plastic (making them ideal for ceiling panels) and can even be applied to curved surfaces.

Designs courtesy of DesignOrr Glass

With the RegaLead Decorative Glass Overlay system customers have an incredible amount of design freedom and structural strength unlike traditional leaded light manufacture.

The 2009 Stained Glass Art Film Collection

now offers over 350 fabulous colours and special effects. It is by far the largest range of overlay film materials available today with over 70 new inspirational products to choose from.

New Clear Textures - several new patterned glass effects have been added to our portfolio of back ground films. Stunning and practical results can be achieved in bathroom windows, entryways and other areas where privacy and light diffusion are a necessity. Clear textures are particularly attractive when used in conjunction with our range of beautiful Fusion tiles or traditional Regabevels. These exciting products embrace all design styles from the modern symmetrical look of Reed and Spira to the more traditional look and feel of Mississippi Glue chip and Rococco. Choose from varying levels of obscurity from the soft light diffusion of Shimmer and the mystery of Colorado.

More Opaque Options - the success of the RegaLead Streaky Opaque and Marble film range has prompted more shades and tones where the artist can achieve higher levels of privacy in decorative glass design. Take a look at the new muted, natural tones, perfect for feature design panels. Plain or marble, wispy or opaque, the possibilities from our entire collection are endless.

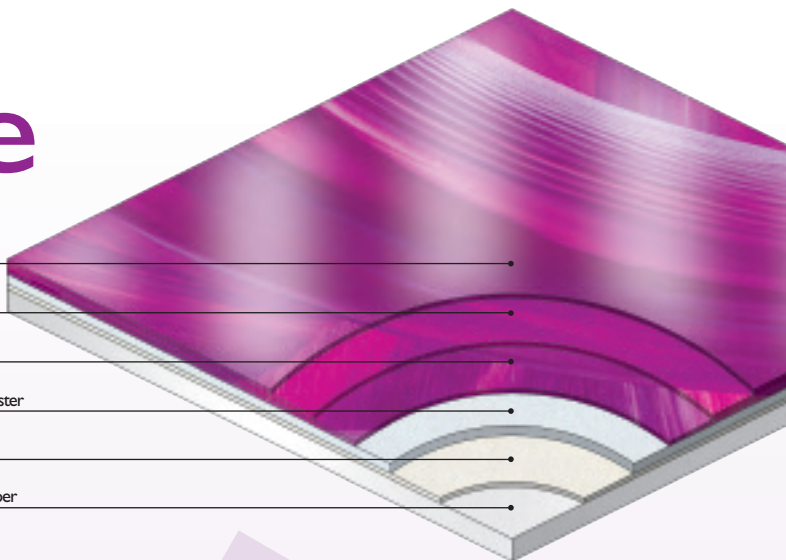

Custom Printing - RegaLead have a specialist in house facility offering custom overlay printing to suit customers requirements. This service is suitable for higher volume users of repeat designs, printed films and UV printed products. Please contact our sales office with your enquiry.

technical performance

Only the finest quality, polyester based materials and UV stable inks are used in the making of Stained Glass Art Film colour effects and textures and they are guaranteed not to fade, crack or de-laminate (ask for a copy of our guarantee).

- Laminate** - 25 micron polyester
- Adhesive** - 23 micron
- Colourant** - 23 micron
- Base Material** - 50 micron polyester
- Adhesive** - 23 micron
- Release Liner** - 147gsm kraft paper

They also feature a three layer construction, with built-in UV filters to give them excellent weathering performance. The specially formulated top laminate layer protects the inks, increases UV resistance and maintains a high level of scratch resistance.

With Stained Glass Art Film, designs can be created that benefit from over 90% UV filtration when complete coverage of the glass is achieved, providing the comfort that furnishings are protected from fading in direct sunlight - a customer selling point.

Stained Glass Art Film also acts as a safety film when 100% coverage of a piece of untempered glass is achieved - in accordance with the US safety glass standard ANZI Z97.1-1984.

Sheet Size	460mm x 660mm approx.
Temperature Range	- 46°C to 135°C
UV Filtration	90% to 95% ASTM E903
Colour Stability	All products rate 8+ on blue wool scale
IG Unit performance	Conforms to fogging requirements of EN1279
Weathering	1000 hours ASTM G154-00

As these materials have been used throughout the world - from the heat of the Australian outback to the cold and damp of a Russian winter - with no reported failures, we are confident in giving a 10 year guarantee and an estimated life expectancy of over 25 years.

marketing support

Due to the limitations of photographic and printing processes the colours shown throughout this brochure can only be a representation of the true colours and effects created by the Stained Glass Art Film range. To aid clarity and accuracy of presentation and design, we offer a comprehensive swatch and sampling service. Swatches are available printed on to acetate - clearly defining the opacity level of the products, and include:

Range Swatches - a selection of fan swatches indicating colours and styles of the complete catalogue of overlays. The individual acetate pieces are 115mm x 60mm and are available as a set or in smaller product groups - Plain & Translucent, 100 & 200 series, 300 & 400 series, 500 & 600 series and Background Effects.

Individual Samples -

our sampling service allows you to select actual film pieces, indicating colour clarification, style and reference, for presentation to your customers

Colour Selector CD - the colour selector CD shows the complete range of Stained Glass Art Film and its applications in design projects in an easy to use flash program.

GlassEye 2000R Image Library - for users of our design software, we can supply the whole range of Stained Glass Art Films in jpeg format to add to the glass images library.

Index

Plain Colours

Pages 5 - 7

Plain colours, most of which are translucent, allow a high degree of light transmission and low level of obscurity. There is a wide range of choice from very pale tints to vibrant colours suitable for most applications. Plain colours can be used together with the background effects to give a textured appearance and gain a higher level of obscurity. Opaque plain colours are shown as 'OP'.

Streaky Opaques

Pages 14 - 15

Streaky Opaques are a more traditional patterned film with many shades and tones and varying levels of opacity.

Light Grains and Dark Grains

Page 8

Dark Grains have a solid colour base with subtle black streaks. Light grains have a pale colour streaked across a clear background, and can be used alone, or on top of a plain colour to add depth.

Semi-Opaque Wisps

Page 16

Semi opaque wisps are subtle wisps with white, making them ideal for areas requiring a high level of privacy.

White Grains and Opaque Ripples

Page 9

White Grains are a small selection of opaque colours, with a soft grain effect running through. Opaque Ripples have pale background tones created by the contrasting ripples of colour.

Lustres & Metallic Effects and Metallic Wisps

Page 17

Metallic effects gold, silver, copper & mirror are solid with a high level of obscurity, and the metallic finish on the front. Pearls are clear and pale colours with a iridescent laminate on top, giving a mother of pearl effect. Metallic wisps have vibrant swirls of colour through a clear background blended with copper or gold to add an opulent look.

Semi-Transparent Wisps

Page 10 - 11

Semi Transparent Wisps give the appearance of wispy glass, with vibrant swirls of colour through a clear background. They are ideal for use where a traditional stained glass effect is required and have a similar obscurity level to plain colours.

3-Colour Wisps and Colour Blends

Page 18

3 Colour Wisps have vivid streaks of colour banded across a clear background and can be used in areas where plenty of colour is needed. Colour blends have horizontal lines of blended colours and are ideal for use where a shaded effect is required.

Abstracts

Page 11

Abstracts have a dynamic abstract appearance, with one or more colours blended with white or clear.

Borders and Etched Patterns

Page 19

Borders are motifs repeated in strips across the sheet and are best used in traditional style designs.

Marbles

Page 12 - 13

Marbles have a transparent background with a marbled pattern running randomly through the sheet in complimenting and contrasting colours. Some marbles have an opaque background and are shown as 'OP'.

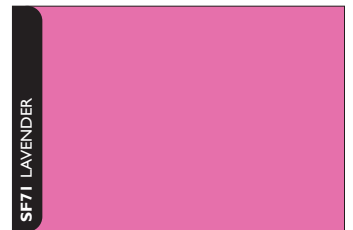

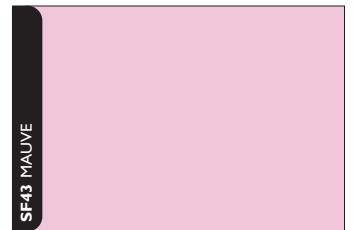

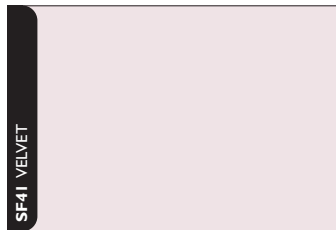

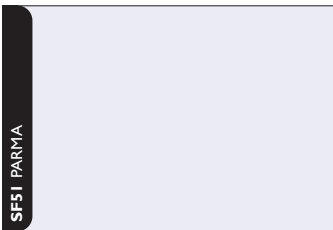

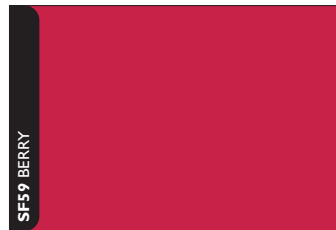

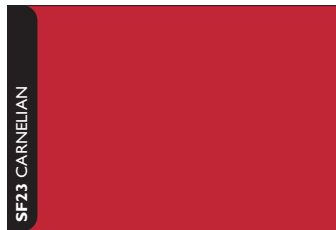

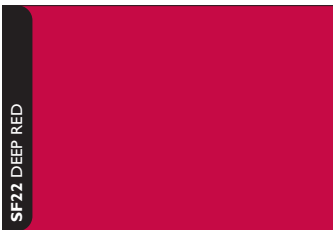

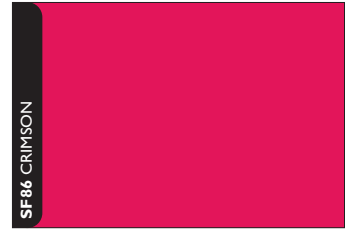

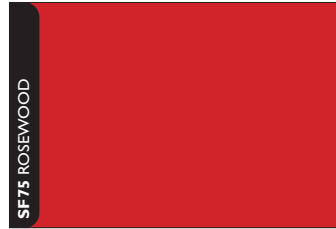

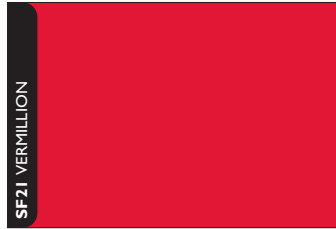

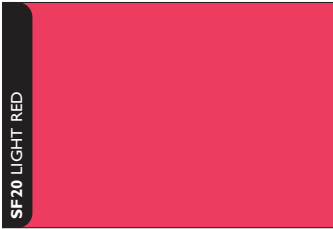

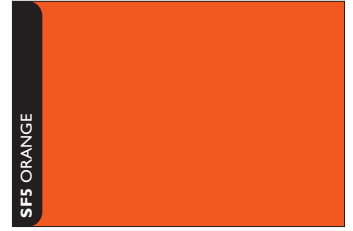

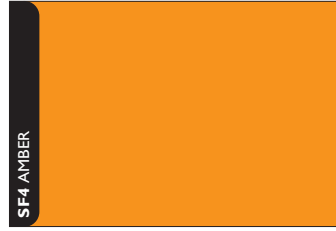

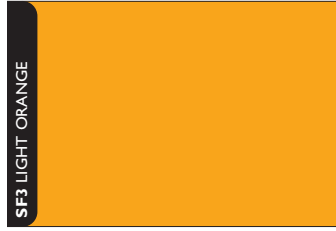

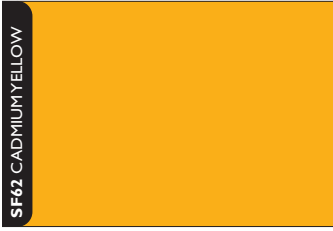

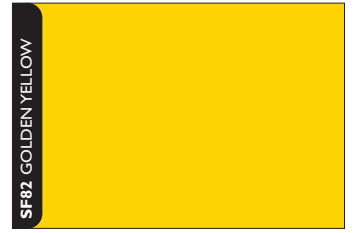

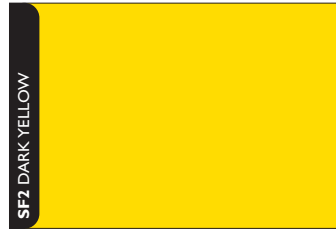

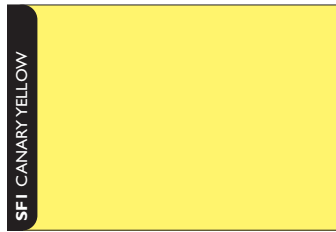

Embossed Backgrounds and Background Effects

Pages 20 - 25

Embossed backgrounds are clear with a textured pattern embossed onto the sheet. Printed backgrounds are clear with a printed texture or design in frost effect. Both embossed and printed backgrounds can be used on the back of plain colours to give them added interest.
